TITLE : HINGE CAP

ABSTRACT : PROBLEM TO BE SOLVED: To provide a hinge cap in which the structure of a hinge is simplified, a crown member can be moved in one step operation, a projection from a side wall of the cap is made as small as possible to improve the capping property.

SOLUTION: A hinge cap is provided with a lid member 1 suitable for engagement with an opening neck part of a container, and a crown member 2 to form a final cap, the lid member 1 and the crown member 2 consists of bottom wall parts 12, 22 and peripheral skirt parts 11, 21 respectively, and are integrated with each other by a pair of integrating hinges 3 to be projected from the skirt parts of the members. At least a leaf spring 4 together with a pouring outlet for small amount at a time is provided on an upper part of the bottom wall part 12 of the lid member 1, and a holding plate 5 is provided on the bottom wall part 22 of the crown member 2 so that the leaf spring 4 is pressed and bent when the lid member 1 and the crown member 2 are overlapped each other by the integrating hinges 3. A fixing device to be closed by engaging the lid member 1 with the crown member 2 is provided when the lid member 1 and the crown member 2 are in the closed position.
